

D-SCENT

Bio-Formulation Odor Controller *Specifically designed for portable toilets*

General Description:

D-SCENT'S Odor Controlling Bio-formulation

incorporates a special biodegradable fragrance, surfactant (Detergents for cleaning) and a specialized blend of selected micro-organisms with unique capabilities for the stabilization and digestion of organic wastes. The cherry fragrance offers immediate odor control while the bacteria go to work.

D-SCENT's bio-formulation goes a step beyond chemical deodorants and masking agents.

D-SCENT provides a natural biological formulation which begins to breakdown, liquefy, and deodorize waste on contact.

D-SCENT's special blend of bacteria begins work immediately on the breakdown of waste, tissue, detergents and oils. This natural bio-enzymatic function will result in reduced solids of all waste, little or no odor; and most importantly... a holding tank that is easier to pump, free of contaminants and acceptable for discharge at most dumping (waste) facilities.

Benefits:

- Immediate odor control with biodegradable fragrance
- Breaks down and digests all organic compounds
- Controls odors immediately
- Non-corrosive, non-pathogenic; safe to handle and store
- Non-staining blue dye
- Makes pumping easier and waste is acceptable at most dumping facilities
- Each batch is tested and standardized for a high level of quality
- Certified salmonella-free
- Concentrated at 5:1 or ready-to-use
- Buffers to balance pH level
